Sleep World...

Sleep, which is a miraculous reality for every living creature is the process of renewal for body and mind. It is a basic need just like breathing, eating and drinking water. Your sleep must be uninterrupted and high-quality to rest really and feel healthy and ready for a new day after sleep. Refreshing night sleep is vital to maintain a balanced and healthy life.

A Good Sleep and More!

All valuable details are absolute must for a good sleep in İDAŞ, such as providing optimum support that body needs, protecting natural "S" line of backbone, giving anatomical support by filling waist and neck cavities. With correct bed, it is also possible to prevent some health problems such as posture disorders, involuntary movements, circulatory disorders, etc. beyond resting well. Person loses fluid during sleep just like he/she loses in a day to protect body temperature and needs air.

Thanks to air permeability and moisture control systematics of sleep products, temperature balance is preserved and sleep interruption is prevented. Person becomes peaceful when he/she sleeps in an environment where formation of moisture and bad odors, bacteria and dust mites are not allowed and hygiene is protected. Functional and personalized products which serve needs raise the coefficient of pleasure and create a sense of belonging. Therefore, sleep latency realizes in the optimum time and you have your time.

İDAŞ Sleep...

We design and protect best sleeps for you. Our engineers and experts perform their R&D operations with technologies of sleep industry, so we protect our quality standard with our half-century experience. We present our sleep world to your taste with a value created by master hands.

Uninterrupted sleep with 3D comfort and Mira-Coil!

3D formed support layers offer comfort as if on the clouds. The intense support offered with the continuous spring system Mira-Coil provides a firm sleeping surface while it is supporting the spine anatomy.

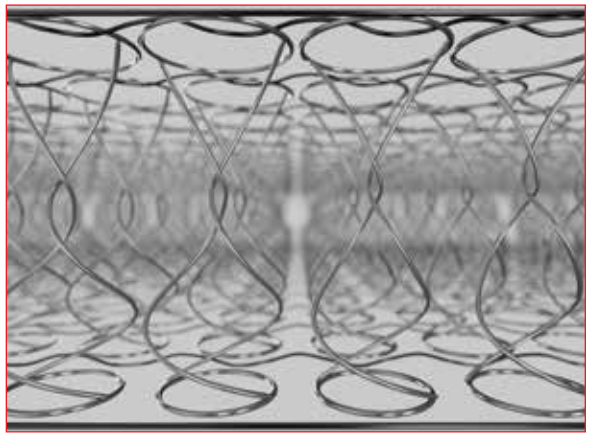

While the special knitted- fire retardant fabric provides moisture management as well as supporting the permeability of the mattress, the special SALTEKS-Chemical Free fiber filling, free of chemicals prevents the formation of bacteria and mites.

19. FR High Quality Knitted Fabric

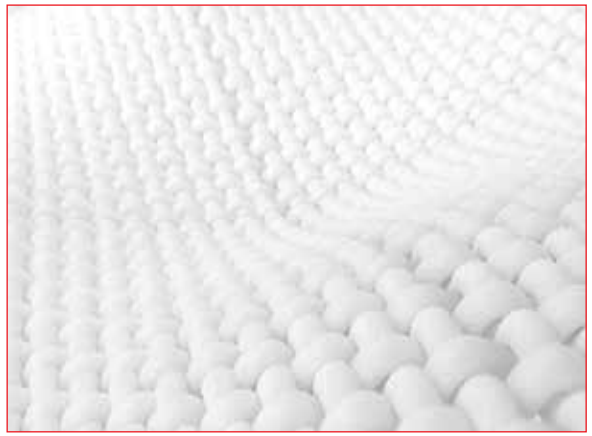

Mira-Coil

Mira-Coil continuous spring technology developed by Leggett & Platt and produced only by İdaş protects the spine by showing a balanced resistance against body weight. Anatomical support is provided by distributing the pressure on the mattress surface to the entire surface. Thus, both back and waist pains are prevented and an uninterrupted sleep experience is provided.

3D Comfort

Viol cut created as a result of gaining 3 dimensions of the foam which acts as a support layer, with a special process; is a technology that significantly increases the comfort in mattresses. With this cutting technique, it adapts perfectly to the body cavities and is supported in a way that gives a massage feeling. In addition to providing 3 dimensional comfort during sleep, it also supports air transfer.

Stay Away From The Chemical

Raw materials with fibrous structure are preferred in Chemical Free Fiber fillings used in İDAŞ mattress. Fillings produced with SALTEKS assurance without using any chemical binders offer all the conditions required for a healthy sleep.

- Oeko-Teks 100 Certificate.
- Respects people and the environment.
- Recyclable, fibrous product.
- Ideal for those with disorders such as bronchitis, asthma and allergies.

Feather-soft comfort and uninterrupted sleep with Mira- Coil support!

Feather-soft foam layers offer a magnificent sleep experience as if on the clouds. The intense support offered by the continuous spring system Mira-Coil provides a rigid sleeping plane while supporting the spine anatomy.

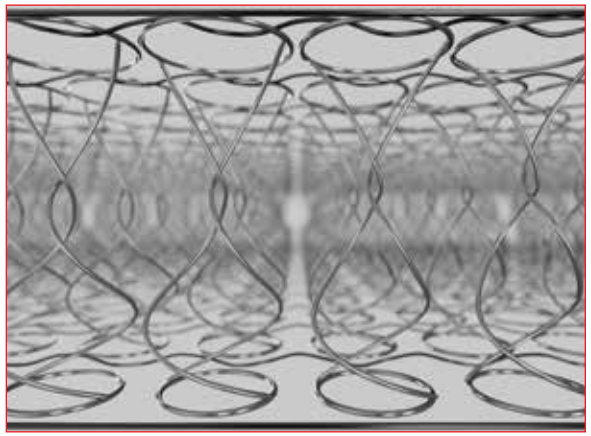

Besides supporting the permeability of the mattress, fire-retardant special knitted fabric reduces the formation of bad odors by providing moisture management.

5 Zone Pocket Spring

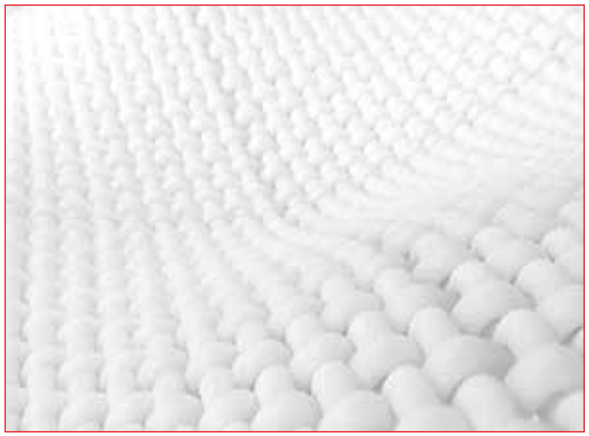

5 Zone Pocket Spring System is created by placing the springs produced individually into interconnected fabric bags. Springs produced with wires of different diameters have different degrees of hardness. An ergonomic mattress surface that supports the shoulder, lumbar vertebrae and gluteal area separately has been obtained with springs arranged in 5 zones in accordance with human anatomy. A structure adapting to the spine has been created in order to prevent muscle aches and stiffness and preserve the natural body curve.

All Seasons Label

İDAŞ mattresses with the all seasons label provide a healthier and longer-lasting use by reminding you to change the direction of the mattress at certain intervals. Mattresses whose direction of use is changed offer a sleep experience suitable for all seasons, eliminating sweating and chilling complaints.

By paying attention to the labels on the mattress, you can enjoy a balanced and good sleep for many years.

Stay Away From The Chemical

Raw materials with fibrous structure are preferred in Chemical Free Fiber fillings used in İDAŞ mattress. Fillings produced with SALTEKS assurance without using any chemical binders offer all the conditions required for a healthy sleep.

In addition to providing 3 dimensional comfort during sleep, it also supports air transfer.

HRS Support

Pressure dependent on weight applied to the mattress surface is one of the main factors affecting the time to fall asleep. The support provided by the mattress according to the pressure applied has an important role in protecting the spine health as well as a comfortable sleep. HRS support layers maintain their quality with the bond structure that defies the years. The provided support offers an anatomical sleeping surface, promising a comfortable sleep.

Moisture Management and Air Transfer

Surface quilting developed with knitted fabric, HYP and SALTEKS-Chemical-Free Fiber offers a soft welcome. While the knitted fabric provides air transfer, it also helps maintaining the heat balance in sleep and supports the moisture management.

Steel Circle

Developed with the technique of stapling the mattress springs together with a steel frame, this feature prevents the axial slippage of İDAŞ mattresses and extends their useful life. This technology, which supports the frame carrying the mattress, plays an important role in maintaining the form of the mattress.

This way, it creates the necessary conditions for a healthy and comfortable sleep experience for many years and provides you with İdaş quality.

17. FR High Quality Knitted Fabric

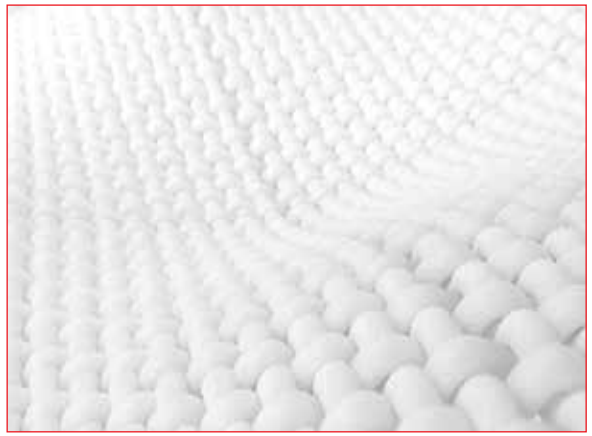

Bonnell Spring

Bonnell Spring made of steel springs tempered with heat treatment, supports the protection of the ideal ‘S’ line of the body and ensures equal distribution of body weight on the surface. By fixing the spring carcass with the frame system, the life of the mattress is supported. It resists the collapse complaint that may occur.

3D Comfort

Viol cut created as a result of gaining 3 dimensions of the foam which acts as a support layer, with a special process; is a technology that significantly increases the comfort in mattresses. With this cutting technique, it adapts perfectly to the body cavities and is supported in a way that gives a massage feeling. In addition to providing 3 dimensional comfort during sleep, it also supports air transfer.

Fire Retardant

The knitted fabric provides air transfer while it helps maintain the heat balance during sleep, and supports moisture management.

All İDAŞ Hotel mattresses are equipped with FR qualified, fire retardant fabric, and supported to be used with the same quality and comfort for many years.

Comfort 200

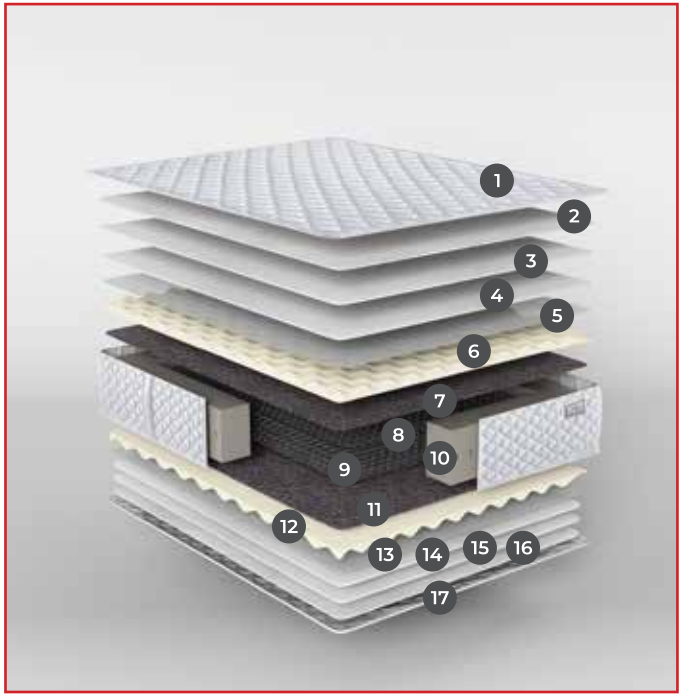

A perfect sleep experience offered by balance!

Comfort 200 offers the ideal comfort to different body types with the High Bonnell Spring. Bonnel Spring with height of 28 cm provides a unique spring effect.

In addition to its double-sided use, special SALTEKS-Chemical Free fiber filling, free of chemicals, prevents the formation bacteria and mites, and promises a hygienic sleep experience.

In addition to its double-sided use, the special woven fire fretardant fabric preserves its heat balance as well as its elegant appearance.

By fixing the spring carcass with the frame system, the life of the mattress is supported. It resists the collapse complaint that may occur.

Stay Away From The Chemical

Raw materials with fibrous structure are preferred in Chemical Free Fiber fillings used in İDAŞ mattress. Fillings produced with SALTEKS assurance without using any chemical binders offer all the conditions required for a healthy sleep.

- Oeko-Teks 100 Certificate.
- Respects people and the environment.
- Recyclable, fibrous product.
- Ideal for those with disorders such as bronchitis, asthma and allergies.

Comfort 150

Meet comfortable sleep with Comfort 150 that allows your body to breathe.

Thanks to the Bonel spring system, it adapts to the shape of your body and prevents sweating with its breathable structure. The other spring system used, the coil spring wire, increases durability.

In addition to its double-sided use, it has high air permeability and antiallergic properties with thermobond felt and fiber layers.

By fixing the spring carcass with the frame system, the life of the mattress is supported. It resists the collapse complaint that may occur.

All Seasons Label

İDAŞ mattresses with the all seasons label provide a healthier and longer-lasting use by reminding you to change the direction of the mattress at certain intervals. Mattresses whose direction of use is changed offer a sleep experience suitable for all seasons, eliminating sweating and chilling complaints.

By paying attention to the labels on the mattress, you can enjoy a balanced and good sleep for many years.

Moisture Management and Air Transfer

Surface quilting developed with knitted fabric, HYP and SALTEKS-Chemical-Free Fiber offers a soft welcome. While the knitted fabric provides air transfer, it also helps maintaining the heat balance in sleep and supports the moisture management.

Bonnell Spring

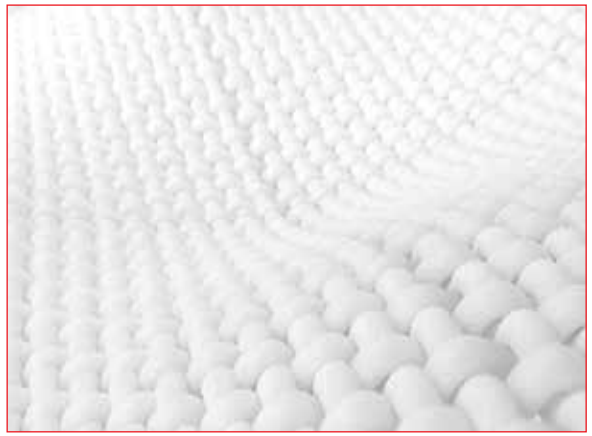

Bonnell Spring made of steel springs tempered with heat treatment, supports the protection of the ideal ‘S’ line of the body and ensures equal distribution of body weight on the surface. By fixing the spring carcass with the frame system, the life of the mattress is supported. It resists the collapse complaint that may occur.

Steel Circle

Developed with the technique of stapling the mattress springs together with a steel frame, this feature prevents the axial slippage of İDAŞ mattresses and extends their useful life. This technology, which supports the frame carrying the mattress, plays an important role in maintaining the form of the mattress.

This way, it creates the necessary conditions for a healthy and comfortable sleep experience for many years and provides you with İdaş quality.

Fire Retardant

The knitted fabric provides air transfer while it helps maintain the heat balance during sleep, and supports moisture management.

All İDAŞ Hotel mattresses are equipped with FR qualified, fire retardant fabric, and supported to be used with the same quality and comfort for many years.
